BANK SENTIMENT INTELLIGENCE

Citi Analysis

Your customers already told you.

Tshepiso Freddy Thosago

tshepisofrominnostation.github.io/banking-sentiment-dashboard

THE PROBLEM

Half of it was negative.

Nobody read it.

161 reviews · 4 channels · 5 segments

THE SOLUTION

Score. Segment. Prescribe.

CRITICAL **Fix the Banking App first**

owner: Payments & Cards · confidence: Low

The Banking App runs at 61.5% negative against a 52.8% median across other channels. This is a service failure, not a messaging problem.

Evidence. 8 of 13 Banking App reviews are negative; the other channels sit near 52.8%.

Do this. Freeze new features for two sprints and fix the failure path customers hit most. Measure weekly until the channel is within five points of the median.

Impact. Modelled: overall negativity falls from 51.2% to 48.4% (-2.8 pts) if this channel only matched the median.

why low confidence: only 13 reviews — treat as a hypothesis to test, not a finding

HIGH **Protect Young Professional and Family**

owner: Customer Experience · confidence: Low

Your highest-value segments carry the most negativity. These are the customers with the longest remaining fee life, so the cost of losing them is not one transaction.

Evidence. Young Professional 71.4% negative (7 reviews); Family 70% negative (10 reviews).

Do this. Run a two-week listening sprint with these cohorts: call twenty of them, find the shared failure, fix it, then tell them what you fixed.

Impact. Retention work on 2 segments, not blanket campaigns on all five.

why low confidence: only 7 reviews — treat as a hypothesis to test, not a finding

MEDIUM **Low complaints are not satisfaction: Small Business**

owner: Relationship Banking · confidence: Low

Small Business shows only 25% negative, but on 8 reviews. An unhappy business client tends to leave quietly rather than write a review.

Evidence. 8 reviews total — too few to read silence as approval.

Do this. Survey twenty Small Business clients before their next renewal. Ask what would make them switch.

Impact. Converts a blind spot into evidence for roughly the cost of twenty phone calls.

why low confidence: explicitly low-volume: this is a hypothesis to test

MEDIUM **Route the language customers actually use**

owner: Service Desk · confidence: Medium

The strongest negative terms point at specific owners, so complaints can be assigned instead of absorbed by a general inbox.

Evidence. "money" → Payments & Cards; "minutes" → Branch operations.

Do this. Send each theme to its owner with ten verbatim reviews attached. No summary, just the customer's own words.

Impact. Turns an aggregate score into five work items with names on them.

why medium confidence: term frequency over negative reviews only

It does not report. It prescribes.

Fix the Banking App first
